DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figures 12A-14 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The title of the invention is not descriptive and is therefore objected to. A new title is required that is clearly indicative of the invention to which the claims are directed. The following title is suggested: STAPLE FORMING AND DRIVING MACHINE.
4. The abstract of the disclosure is objected to because it is in claim format. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

5. Claims 5 and 7 are objected to under 37 CFR 1.75 as being a substantial duplicate limitation of claim 1. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "the same plane". There is insufficient antecedent basis for this limitation in the claim.

Drawings

7. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "20" has been used to designate both "a recess portion" and "a movable anvil" as shown in the specification, page 16, lines 23-24. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid

Art Unit: 3721

abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Olesen et al. 4,573,625.

Olesen discloses a stapler comprising a cartridge 90 with staple members in a straight shape 94, a striking portion formed with a striking path, a magazine at 32, a staple supply mechanism formed in the magazine as shown in Figs. 9-10, a forming plate 70 that forms the staple member in a c-shape, a driver plate 80, a clincher mechanism that folds and bends a leg of the staple member as shown in Figs. 5-6, and a movable anvil 60 (claim 1); the driver plate 80 and the forming plate 70 are operated on a same plane (claim 2); wherein the forming plate is formed by a plate member with legs 72 having a thickness substantially as claimed and wherein the driver plate is formed by a plate member having a thickness at 180 substantially the same as a

Art Unit: 3721

width dimension of a section of the staple member (claim 3); wherein the striking portion is formed at a front end of 102 of the cartridge 90 (claim 4); a staple guide 102 and a fixed anvil via 100 formed at a front end portion of the staple guide 102 (claim 6).

With respect to claims 1, 5, and 7, it has been held that the recitation that an element is “capable of” performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138. Therefore, little consideration has been given to the limitation of “wherein the forming plate is capable of forming the staple member...”. Also, the structure of Olesen’s forming plate is capable of forming the staple members as claimed.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Olesen’841, Olesen’202, Hoshi’334, Murakami’045, Udagawa’114, and Straat’449 are cited to show related inventions.
